

SA2045 Original Monologue

Aiden Choi

The Morality of AI

When I was at the airport, I was amused by the charging phone AI. I was amazed by the face of the AI and how it had different face impressions. The robot came up to me asking, " Would you like to charge your phone?" At that time, I was thinking how the world would be better with artificial intelligence. However, At what point is artificial intelligence considered life? As AI becomes more advanced, what are the moralistic implications of AI?

You might be wondering, what is artificial intelligence ? In 1955, artificial intelligence was invented. Artificial intelligence is an artificial life programmed by humans. They are like Siri and Bixby. Siri is a virtual assistant that is part of Apple operating systems. Bixby is a virtual assistant developed by Samsung Electronics. AIs are made to help people. They can answer questions. For example, if you ask an AI what time it is, the AI will tell you the exact time. Also, almost every person in the world who has

electronics uses AI. Whoever has one of Apple, Samsung, or Microsoft products, has built-in AI.

However, these programmed AIs are basic and cannot think like humans. What will happen when robots become too close to being like humans? For example, Sofia is a social humanoid robot created by David Hanson. According to Zara Stone " The Sophia-bot was dreamed up by the brains at Hanson Robotics, lead by AI developer David Hanson." This explains that this was created by a human. However, She was given citizenship. According to Emily Reynolds, "In 2017, social robot Sophia was given citizenship in Saudi Arabia – the first robot to be given legal personhood anywhere in the world." How does a robot get citizenship if they are not born in the country? " This robot didn't go through childhood and adulthood. .

The solution would be making regulations and policies for artificial intelligence. It would be better to create regulations that AI have the same equality as humans. The solution would be that humans and robots should be treated equally. They would have rights as humans ,and they are in effect of the laws.

In conclusion, I talked about what the problem and solution would be.

The problem is that AI is getting too close to being human. They could become humans who get citizenship and get married. The solution would be making regulations and policies for artificial intelligence to live in a peaceful world.
