

# All From A Single Point

By Ethan Kapoor

Look  
around you,  
everything you see came  
from a single point. This point,  
smaller than an atom, was the birth  
of all creation. Unimaginably hot and dense.  
13.7 billion years ago, the first star was created,  
then the planets, then the galaxies, then us. The plants,  
the trees, the animals, all came from one single point. Everybody you  
know and love, all came from a single point. Every molecule, every atom, every quark  
all from a single point. We know so little about what this was and why it existed. All we can say is  
that, we should all be grateful, this point gave us everything. This single point is what we call,  
**The Big Bang**
